

IIM SERVICES AGENCY

## Utilitarian Component

# EZSMS

### Envoi de SMS standards ou liés, à un ou plusieurs destinataires, envois de masse

**EZSMS** was developed to answer a need for a link between applications developed with Windev and sending SMS to customers. The choice of the SMS suppliers is done with two companies among which the quality of service and seriousness are appreciated by numerous companies. The example supplied allows to see how using EZSMS normally, via a proxy, with multiple sendings (bounded SMS by more than 160 characters), mass sending for advertising. Of an easy use, you can quickly integrate SMS management into your applications with our component.

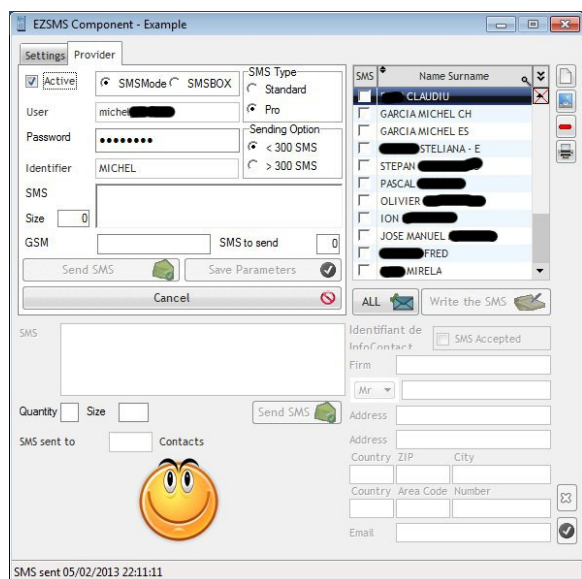

The main window allows making the configuration for the language of use, the activation of a proxy and its parameters user / password.

The creation / modification / deletion of users with the necessary information is also shown in this example.

You can select one, several or all the contacts which are in your database. (You can use your own database and its structure, ours just showing a possibility of use).

During the successful sending of the SMS a smiling smiley appears, otherwise, the smiley is angry!

The choice of the supplier, as well as all the available options of SMS sending are easily configurable by basing itself on our example. User account and Password are configurable.

- Standard SMS or Pro (sent or aborted status)
- Normal Sending / Mass Sending (> 300 SMS)
